

# SpacePole Payment<sup>™</sup>

## Headrest mount for taxis

### APPLICATIONS

- Universal seat mount for in-car credit and debit card payments

### BENEFITS

- Security enabled with ClickSafe<sup>®</sup> tethers
- Reduces twist and turn for both driver and passenger
- Easy use for back seat passenger
- Bracket with MultiGrip<sup>™</sup> interface for both payment terminals and tablet mounts
- A range of mounting options
- PCI best practice compliance
- Competitive price point

### Ergonomic Solutions turns the wheel and introduces the Headrest mount for taxis

Why bring payment mounts to taxis? Card payments, and contactless in particular, are drivers of change in applications and verticals where cash was always thought to be king. Legislation by various Governmental organisations is also providing a requirement for taxi organisations to accept easy to use card payment solutions. In fact, installing and mounting payment terminals to be easily and ergonomically used by the taxi passenger is now a necessity with the increasing use and success of organisations such as Uber and customers preferring to pay by card rather than cash.

With more than 20 years of experience in mounting payment technology, Ergonomic Solutions understands the needs of matching the passengers' expectation, while simultaneously providing a simple, cost-effective solution that does not require enormous amounts of investment by the cab driver or the vehicle owner.

The SpacePole Headrest Mount is a flexible solution that enables payment while seated in the back of the vehicle. Its three mounting options ensure flexibility, and allow the driver to mount more than just a payment device, as the MultiGrip bracket allows for the mounting of a tablet for in-car information purposes.
